

Problem Statement:

Write a program which take data from form using jquery and modular approach and pass data to backend using service layer.

Design backend using Node.js and display data on Node.js console.

additional validation error handling -> form submit service will validate the data as well. If there is any form validation error at backend, service will return error and this will be shown at front end.

Test at least one java script method using jsunit.

Registration Page	
Name	<input type="text"/>
Password	<input type="password"/>
Email	<input type="text"/>
Address	<input type="text"/>
<input type="button" value="Submit"/> <input type="button" value="Reset"/>
