## Problem Statement:

Develop a general web-based calculator application as per below screen shot

- It should perform all basic operations like addition, subtraction, multiplication, division
- There should be option AC to reset.
- Equal to (=) operator button should be there, and this should give appropriate result.
- This application should be implemented using typescript.
- Calculator should be accessible and follow best practices for make it web accessible.
- It should use the form tag.

0	AC
7	8	9	÷
4	5	6	×
1	2	3	−
0	.	=	+

Note: **Time given for assignment is 2 hours.**
